- [Stock control](#)
- [Picking](#)
- [Despatch](#)

K-store integrates into your current warehouse set-up and is run on simple desk top PC stations. K-store brings you, Improved performance Management of your warehouse Simple and cost effective Accuracy and control

Goods in

K-store effectively and efficiently manages the process of receiving goods in.

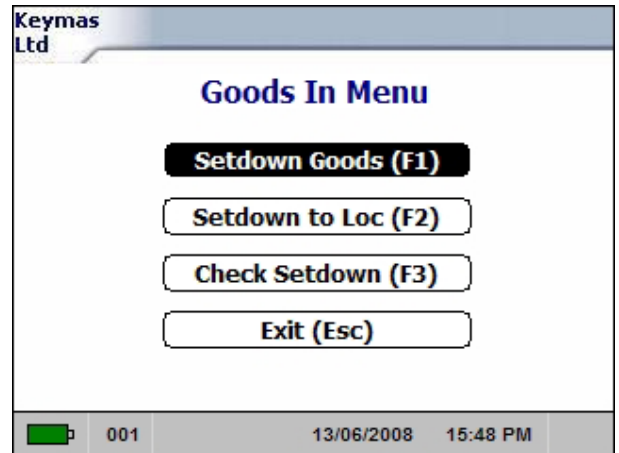

Product received – As products enter the warehouse K-store automatically logs the date and time as well as the supplier details against a unique product reference. This begins the tracking process which continues right through until the product leaves the warehouse and is despatched.

Quality check – Managing the quality of your product is essential as you aim to meet your quality standards. K-store makes this process easy by attributing any product issues directly with the unique reference number allowing you to reference supplier and delivery details. Managing your suppliers and delivery is easier with K-store.

Quarantine – Any defective or low quality goods are quarantined to allow you to manage your quality standards.

Sampling – carry out sampling procedures

Stock value – Enables a real time report of stock value.

Product put away

This is K-store Product put away.

Allows you to fully manage the put-away of products that enter the warehouse into stock locations e.g racking, bins, slots etc.

Location – easily identifies free locations and assigns the product to the appropriate location. This includes both manual and automatic product to location assigning.

Manual override – K-store empowers the simple manual process of product put away, allowing it to be logged, relocated and picked.

Product priority – Allows users to set individual batch rotation.

Location priority – Enables fast moving product to be put away in the appropriate location and also enables quarantine of locations e.g. Damaged pallet location.

Stock Control

Fully control your stock with extensive stock management and essential reporting in K-store.

Stock location – Access multiple product locations including the put away and location of individual pallets or boxes. K-store gives each warehouse operative the ability to locate an individual product at an individual location.

Stock consignment – gives the ability to have random and most efficient locations for stock, offering the most flexible use of the warehouse. Consignment of stock amounts is then available through K-store to provide overall stock levels.

Stock movement – enables stock to be moved around in the warehouse providing efficient picking. E.g fast movers.

Stock rotation – enables multiple stock rotation options including oldest product picked first.

Picking

K-store's order picking process

Increase your warehouse efficiency with direct K-store Picking.

Manual pick – Allows the picker to choose what location to pick the product from.

Pick routing – K-store identifies the most efficient manual pick route, allowing the picker to use the most efficient route to pick.

Batch picking – enables the picker to pick multi-part orders from one location increasing the efficiency and speed of a pick.

Automatic order fulfilment – Orders assigned to picking zones for efficient picking operation and consignment offering the most efficient picking operation.

Despatch

Despatching – automatic log profile of individual items to be despatched. Allows full management of the despatch process.

Despatch manifest – hard copy of items despatched including amongst other things who despatched them and the date and time they were despatched.

Weight – K-store stores and logs individual item weights and therefore offers an indication of consignment weight. Useful when working on a combined weight basis.

Despatch note and delivery labelling – offers the facility to print despatch notes and consignment labels and an option for automatic print and apply.

Despatch sortation – Individual consignment boxes can be sorted and applied for delivery drop order.

Some Frequently asked questions :-

How can K-store meet my efficiency targets?

The k-store team work directly with you to meet all your targets. K-store is designed to put the tools needed to manage a warehouse in the hands of the operations/warehouse/logistics manager. Therefore whether the aim is to reduce personnel expenditure, to increase your throughput and pick rate or become more efficient and professional, the K-store team will work directly with you to meet any of your targets.

How can K-store help me save money?

K-store is a small investment to manage your warehouse. The system allows you to increase throughput, improve your pick rate, improve data capture, manage stock movement and control, and reduce wastage. All this leads to a cost saving overtime.

Can K-store help me improve performance?

K-store has a proven track record of directly improving warehouse performance. K-store has,

- directly improved pick rates
- improved throughput
- improved data accuracy

This works through the 5 key stages of K-store. K-store managed goods in prevents data input inaccuracies, K-store product put away allows your products to be located in the most efficient space in your warehouse, allows multi-use locations, and manages damaged or unusable locations, K-store stock control gives you control and full information management over the activities in your warehouse. K-store order picking has in the past improved pick rates by up to 300% giving you the most efficient pick routes. K-store dispatch prevents incorrect packing and data inaccuracies.

Will K-store work in my industry?

Where goods are stored and moved around in a warehouse or distribution centre K-store is the perfect management tool needed to successfully operate the warehouse. The K-store team have implemented solutions in many industries including food/beverage, manufacturing, automotive, retail, logistics and distribution, white goods, direct selling, clothing, footwear, printing, paper along with many other key industries. Contact us if your industry is not named above to see if we can help you.

Will K-store suit my business?

K-store directly manages the warehouse and distribution centre. If you have some form of warehouse where you receive goods in, store them or alter / manufacture them, then despatch them, K-store is essential in managing your warehouse and distribution.

Will K-store integrate with my current system?

K-store is designed with full integration and compatibility, designed to fit into your current operation. K-store integrates with current software, innovatively processing data exchange between your current software and K-store software processes.

K-store also integrates with automation equipment already in place in your warehouse. Conveyors, elevators, wrappers, printers all integrate into K-store.

What makes K-store different from other WMS offers?

K-store simply focuses on the 5 key elements to managing your warehouse, goods in, product put away, stock control, picking and despatching. Most WMS's run complicated invoicing and customer relationship management calculations, as well as integrative accounting management. K-store simply manages the warehouse. This is why K-store is so simple and cost effective, we focus on the tools you need to manage your warehouse.

How is K-store so simple?

K-store focuses on the core essentials of the warehouse. Whereas many Warehouse Management Systems (WMS) run complicated invoicing systems, complex customer management data, and time consuming accounting algorithms, K-store focuses on the essential functions of the warehouse.

Goods in, Product putaway, Stock control, Picking, Despatch

All you need to successfully manage your warehouse.

How much does it cost?

K-store is designed to specifically meet your requirements and needs in your warehouse. Therefore each system is altered for different requirements. But as a guide,

K-store express –from £8k

K-store advanced – from £20k

K-store integrated – from £80k+

Our new online 'K-store web' – runs from £499 a month

Why is K-store cheaper than other WMS offers?

K-store is designed to manage the most crucial areas of the warehouse. Unlike other WMS offers it does not concern itself with customer relationship management, accountancy algorithms and other intense management software, it simply and efficiently manages the warehouse. Therefore K-store is offered at a lower cost as it is innovatively designed to meet the needs of warehouse managers and distribution directors only.
